Winklevoss Blended Bitcoin Index

The Winklevoss Blended Bitcoin Index (WBBI)¹ is used to collar the 4pm Eastern Time Gemini BTCUSD auction (Gemini Auction). The Gemini Auction is the settlement pricing mechanism used for the Bitcoin Futures Contracts (XBT), which trade on the Cboe Futures Exchange, LLC (CFE) under the ticker symbol “XBT” ([contract specifications](#) | [fact sheet](#)).

XBT Futures

XBT futures are cash-settled contracts based on Gemini’s Auction price for bitcoin, denominated in U.S. dollars (symbol: BTCUSD). XBT futures are specifically designed to allow participants to implement straightforward trading strategies through settlement via a single, tradeable auction price.

- XBT futures are cash settled — see [contract specifications](#) for details
- Final settlement value (XBTS) will reflect the Gemini Auction price on the day of settlement
- XBT futures will enable investors to take a directional view on the price of bitcoin (both long and short), gain exposure to bitcoin prices, or hedge their existing bitcoin positions
- XBT futures will bring benefits to traders, including transparency, efficient price discovery, deep liquidity, and centralized clearing
- CFE is regulated by the Commodity Futures Trading Commission (CFTC)
- Gemini Trust Company, LLC (Gemini) is a New York trust company regulated by the New York Department of Financial Services (NYDFS)
- Gemini is a digital asset exchange and custodian that allows customers to buy, sell, and store digital assets such as bitcoin.
- Gemini and CFE have cross-market surveillance and information-sharing agreements in place

Gemini Auction

The Gemini Auction runs every day, including on weekends and holidays. Among other controls, a successful Gemini Auction price must be within a required range of the collar price. Gemini uses the WBBI to collar the Gemini Auction.²

The Gemini website and market data show the Gemini Auction price and quantity as well as the WBBI value used as the collar price.

¹ Winkdex® and Winklevoss Index® are registered trademarks. Winklevoss Blended Bitcoin Index, WBBI, Cboe, and XBT are proprietary marks.

² Gemini will use the closest reasonable value of the WBBI to 4pm ET.

Indicative Auction Prices

Starting at 3:50pm ET, ten minutes before the Gemini Auction runs, Gemini publishes an indicative Gemini Auction price (Indicative Price), quantity, and WBBi collar price every minute.

Starting at 3:59pm ET, one minute before the Gemini Auction runs, Gemini publishes an Indicative Price, quantity, and WBBi collar price every fifteen seconds.

Each Indicative Price event will use the WBBi value at the time of calculation as the collar price. The market data for every Indicative Price event includes the WBBi value used as the collar price.

More Information

Visit Gemini's website to learn more about [Gemini Auctions](#) and view our [API Documentation](#). Our connectivity options meet the needs of sophisticated traders; they include REST, WebSockets, and FIX via cross-connect from the Equinix NY4 or NY5 data centers. You can use these protocols to access public market data as well as private trading sessions. To set up a cross connect, please contact us at connectivity@gemini.com.

Visit Cboe's website to learn more about [XBT](#).

How Is the Index Calculated?

The WBBi is a ten minute volume-weighted average (VWAP) that discards the quantity from prices under the fifth and over the 95th percentile.

Methodology

This example has been simplified to make the calculation clear. For instance, each table shows only ten trades from only three constituents.

Step One: Assemble Constituent Trades

Assume that these ten trades were collected from three constituent exchanges over ten minutes. Timestamps are represented as integers for simplicity.

<i>Source</i>	<i>Timestamp</i>	<i>Price (USD)</i>	<i>Quantity (BTC)</i>	<i>Quantity As Percent of Total Quantity</i>
---------------	------------------	--------------------	-----------------------	--

Exchange A	1	57	18	18.00%
Exchange B	2	51	8	8.00%
Exchange C	3	52	14	14.00%
Exchange B	4	59	5	5.00%
Exchange A	5	54	10	10.00%
Exchange C	6	55	14	14.00%
Exchange B	7	56	6	6.00%
Exchange A	8	50	2	2.00%
Exchange A	9	58	11	11.00%
Exchange C	10	53	12	12.00%

Interlude: sanity check

- For each data point, parse a valid representation of a trade to check for clearly erroneous data
- Check whether one exchange is providing price data that is far off from the pricing data of the other exchanges. We refer to this as [Possibly Erroneous Values](#).

Calculate VWAP Values for Individual Constituents

Volume is price multiplied by quantity. The VWAP is the sum of the volumes divided by the sum of the quantities.

<i>Constituent</i>	<i>Calculation</i>	<i>Result</i>
Exchange A	Sum of volumes: $(57 * 18) + (54 * 10) + (50 * 2) + (58 * 11)$ Sum of quantities: $18 + 10 + 2 + 11$	56
Exchange B	Sum of volumes: $(51 * 8) + (59 * 5) + (56 * 6)$ Sum of quantities: $8 + 5 + 6$	54
Exchange C	Sum of volumes: $(52 * 14) + (55 * 14) + (53 * 12)$ Sum of quantities: $14 + 14 + 12$	53

Compare Constituents

We will use the following methodology to ensure on market pricing for each constituent of the WBBI:

1. Calculate the median of constituent VWAPs
2. Select the constituent (or constituents in the case of a tie) VWAP that is the greatest percentage difference from the median
 - a. If the VWAP difference is greater than or equal to 10%, remove the constituent(s) from the list of participating constituents and return to step one
 - b. If the VWAP difference is less than 10%, proceed to step three
3. Calculate the percentage of constituents that have been removed from the list of participating constituents
 - a. If 50% or more of all WBBI constituents have been removed, then all of the constituents will be used to calculate the WBBI value, which will be used as the collar price for the Gemini Auction. The intent of the individual constituent VWAP pruning is to remove potentially erroneous data, not to eliminate legitimate volatility.
 - b. If less than 50% of all WBBI constituents have been removed, then the remaining constituents will be used to calculate the WBBI value, which will be used as the collar price for the Gemini Auction

In the simplified example above, the median VWAP is 54 and all three WBBI constituents are included in the calculation of the WBBI.

To better demonstrate iterative removal, here's a second example using four WBBI constituents:

WBBI Constituent	VWAP (USD)
Exchange W	17,500
Exchange X	17,800
Exchange Y	18,200
Exchange Z	22,400

- All four exchanges are constituents of the WBBI and the median of constituent VWAPs is calculated as 18,000 USD
- Exchange Z has the VWAP with the greatest difference from the median, which is $(22,400 - 18,000) / 18,000 = 24.44\%$ off of the median
- Exchange Z is removed from the list of participating constituents
- The new median of participating constituent VWAPs is 17,800 USD

- Exchange Y has the VWAP with the greatest difference from the median, which is $(18,200-17,800)/17,800 = 2.25\%$ off of the median
- One of four WBBI constituents — 25% — has been removed from the list of participating constituents
- Exchange W, X, and Y are used to calculate the WBBI and the WBBI will be used as the collar price

Step Two: Sort Trades by Price

Sort all the trades by price, from lowest to highest.

<i>Source</i>	<i>Timestamp</i>	<i>Price (USD)</i>	<i>Quantity (BTC)</i>	<i>Quantity As Percent of Total Quantity</i>
Exchange A	8	50	2	2.00%
Exchange B	2	51	8	8.00%
Exchange C	3	52	14	14.00%
Exchange C	10	53	12	12.00%
Exchange A	5	54	10	10.00%
Exchange C	6	55	14	14.00%
Exchange B	7	56	6	6.00%
Exchange A	1	57	18	18.00%
Exchange A	9	58	11	11.00%
Exchange B	4	59	5	5.00%

Step Three: Identify Trades with Prices in Cutoff Threshold

Once trades have been sorted by price, discard the trades in the bottom and top 5%. This will eliminate volume from the prices under the fifth and over the 95th percentile in the VWAP calculation.

<i>Source</i>	<i>Timestamp</i>	<i>Price (USD)</i>	<i>Quantity (BTC)</i>	<i>Quantity As Percent of Total Quantity</i>
---------------	------------------	--------------------	-----------------------	--

Exchange A	8	50	2	2.00%
Exchange B	2	51	8	8.00%
Exchange C	3	52	14	14.00%
Exchange C	10	53	12	12.00%
Exchange A	5	54	10	10.00%
Exchange C	6	55	14	14.00%
Exchange B	7	56	6	6.00%
Exchange A	1	57	18	18.00%
Exchange A	9	58	11	11.00%
Exchange B	4	59	5	5.00%

Step Four: Apportion Trades, Splitting as Necessary

Trades have now been sorted by price, and in the previous step we identified and discarded trades with prices falling within the bottom 5% and top 5% of prices.

If the trades above or below the 5% threshold don't add up to 5% perfectly, then the last trade on the bottom and the first trade on the top will be split into two parts so as to discard only the part of the trade necessary to make up 5% on either side.

In the example below, to discard the bottom 5%, we start by discarding the trade with timestamp eight priced at 50 USD, which is 2% of total quantity. The next trade is the trade with timestamp two priced at 51 USD which is 8% of total quantity. We don't want to discard 10% of the volume, so we will split the trade with timestamp two into two segments: the first, a 3% segment, will be discarded. The second, a 5% segment, will be retained in the VWAP calculation.

To discard the top 5%, no splitting is necessary: the trade with timestamp four priced at 59 USD is exactly 5% of the total quantity.

<i>Source</i>	<i>Timestamp</i>	<i>Price (USD)</i>	<i>Quantity (BTC)</i>	<i>Quantity As Percent of Total Quantity</i>
Exchange A	8	50	2	2.00%
Exchange B	2	51	3	3.00%

Exchange B	2	51	5	5.00%
Exchange C	3	52	14	14.00%
Exchange C	10	53	12	12.00%
Exchange A	5	54	10	10.00%
Exchange C	6	55	14	14.00%
Exchange B	7	56	6	6.00%
Exchange A	1	57	18	18.00%
Exchange A	9	58	11	11.00%
Exchange B	4	59	5	5.00%

Step Five: Calculate VWAP with Retained Values

The table below shows the trades with their new weights after the trades falling within the cutoff threshold were removed or truncated.

Source	Timestamp	Price (USD)	Quantity (BTC)	Recalculated Quantity As Percent of Total Quantity
Exchange B	2	51	5	5.56%
Exchange C	3	52	14	15.56%
Exchange C	10	53	12	13.33%
Exchange A	5	54	10	11.11%
Exchange C	6	55	14	15.56%
Exchange B	7	56	6	6.67%
Exchange A	1	57	18	20.00%
Exchange A	9	58	11	12.22%

The calculation then becomes straightforward: a sum of volumes divided by a sum of quantities.

Sum of volumes: $(51 * 5) + (52 * 14) + (53 * 12) + (54 * 10) + (55 * 14) + (56 * 6) + (57 * 18) + (58 * 11) = 4929$

Sum of quantities: $5 + 14 + 12 + 10 + 14 + 6 + 18 + 11 = 90$

The VWAP for the calculation period in this example is **54.77**.

Missing Values

WBBI values are calculated with the best available trade data at the time of request. WBBI values must be historically reproducible using only values that were known at the time the value was calculated. Missing trades that arrive later will be omitted from the WBBI calculation as of the time of that request timestamp.

If a WBBI constituent has suspended trading at the time the WBBI value is calculated, the WBBI will omit trade data from that constituent for that day.

Example

Assume that these ten trades were collected from three constituent exchanges over ten minutes. Timestamps are represented as integers for simplicity.

Each trade has two timestamps: the timestamp when the trade occurs, and the timestamp when the WBBI data collector received the data for that trade from the exchange's API.

Source	Timestamp	Price (USD)	Quantity (BTC)	Received at timestamp	First calc that includes this datapoint at timestamp
Exchange A	1	57	18	3	4
Exchange B	2	51	8	5	6
Exchange C	3	52	14	6	7
Exchange B	4	59	5	5	6
Exchange A	5	54	10	7	8
Exchange C	6	55	14	9	10
Exchange B	7	56	6	7	8
Exchange A	8	50	2	11	12

Exchange A	9	58	11	12	13
Exchange C	10	53	12	15	16

Every calculation of the WBI is relative to the “received at timestamp.” The first calculation that each data point can be included in is relative to the time it was received.

Missing Data that Arrives Later

A WBI value calculated at timestamp 13 and as of timestamp 14, would not include the last row (the trade from Exchange C) because although that trade occurred at timestamp ten, it was not received until timestamp 15.

<i>Source</i>	<i>Timestamp</i>	<i>Price (USD)</i>	<i>Quantity (BTC)</i>	<i>Received at timestamp</i>	<i>Included at timestamp 14 to calculate value as of timestamp 13?</i>
Exchange A	1	57	18	3	Y
Exchange B	2	51	8	5	Y
Exchange C	3	52	14	6	Y
Exchange B	4	59	5	5	Y
Exchange A	5	54	10	7	Y
Exchange C	6	55	14	9	Y
Exchange B	7	56	6	7	Y
Exchange A	8	50	2	11	Y
Exchange A	9	58	11	12	Y
Exchange C	10	53	12	15	N

Reproducing a Historical Value

A WBI value calculated at timestamp eight and as of any later timestamp (e.g., timestamp 200), would only need to take into account the values that were known as of timestamp eight.

<i>Source</i>	<i>Timestamp</i>	<i>Price (USD)</i>	<i>Quantity (BTC)</i>	<i>Received at timestamp</i>	<i>Included at timestamp 200 to calculate value as of timestamp 8?</i>
---------------	------------------	--------------------	-----------------------	------------------------------	--

Exchange A	1	57	18	3	Y
Exchange B	2	51	8	5	Y
Exchange C	3	52	14	6	Y
Exchange B	4	59	5	5	Y
Exchange A	5	54	10	7	Y
Exchange C	6	55	14	9	N
Exchange B	7	56	6	7	Y
Exchange A	8	50	2	11	N
Exchange A	9	58	11	12	N
Exchange C	10	53	12	15	N

Erroneous Values

If a constituent supplies an individual data point which is clearly erroneous, that trade will be excluded. The Oversight Committee deems the following types of data points clearly erroneous:

- Any unexpected format that cannot be parsed to the expected trade representation documented in the exchange's API documents;
- Missing, non-numeric, or non-positive quantity and/or amount; and
- A trade timestamp with an unexpected format or value (causing issues such as, but not limited to: a timestamp that cannot be parsed to a date or that represents a date in the distant past).

If all the data points supplied by a WBBI constituent during a calculation period are clearly erroneous, then that constituent will not take part in the WBBI calculation for that calculation period.

Possibly Erroneous Values

The WBBI calculation always discards notional volume from prices falling within the fifth and 95th percentile over the calculation period.

As an additional control, the Oversight Committee mandates that before calculating the WBBI value for any period, the WBBI will calculate the VWAP of each constituent over the same period and compare them to each other. The individual constituent VWAP calculation does not

discard any data points, so as to highlight when an individual constituent is far off market with respect to the other constituents.

See [Compare Constituents](#) for a detailed explanation of how individual VWAPs are compared against the median VWAP and, when necessary, removed in an iterative manner.

Methodology Changes

As the market becomes more liquid and volatility decreases, the Oversight Committee will periodically evaluate and adjust the calculation period, the controls for price outliers, and the handling of potentially erroneous data.

To be notified when our methodology changes, please sign up to our [mailing list](#).

Index Constituents

The Winklevoss Blended Bitcoin Index Oversight Committee manages the WBBi constituents. The Oversight Committee aims to select constituents that follow the best possible practices. Consideration may include, among others, one or more of the following criteria:

- Obtaining the highest levels of regulation available in a given jurisdiction;
- Participating in regulated market activities such as cross-market surveillance and information sharing; and
- Robust compliance practices including but not limited to relations around:
 - Anti-money laundering (AML); and
 - Know your customer (KYC).

Eligibility

The eligibility criteria for a digital asset exchange to be considered as a potential constituent in the WBBi may include, among others, the following criteria:

1. The exchange allows spot trading of bitcoin against U.S. dollars;
2. The exchange makes trade data available through a reliable API. If historical trade data is not freely available, the exchange must be willing to provide the calculation agent with a sample of at least the previous two consecutive calendar quarters of trade data;
3. The volume of bitcoin vs U.S. dollars traded on the exchange, as shown by their trade data and obtained through their API, is both steady and significant for the previous two consecutive calendar quarters;
4. The exchange demonstrates ongoing effort to follow all applicable laws and regulations;

5. The exchange seeks to prevent unfair and manipulative conduct or deceptive practices, by engaging in information sharing with regulators, implementing internal trade surveillance tools, and dedicating personnel to monitoring market activity for manipulative conduct or deceptive practices;
6. The exchange has a robust anti-money laundering program and only allows market participants who have engaged in a KYC process to trade
7. The exchange has policies and procedures in place that minimize its exposure to the operational and credit risk of market participants;
8. The Oversight Committee believes that adding the exchange to the WBBI will provide a more representative and stable WBBI price; and
9. The exchange satisfies any additional criteria that the Oversight Committee deems relevant.

Current Constituents

- Gemini Trust Company, LLC (Gemini)
- ItBit Trust Company, LLC (itBit)
- Bitstamp Ltd. (Bitstamp)
- Coinbase, Inc. (GDAX)

When Constituents Change

To be notified when our constituents change, please sign up to our [mailing list](#).

Membership Review

The Oversight Committee meets once per quarter to:

- Review current WBBI constituents against the membership criteria; and
- Consider proposals for new index constituents.

The Oversight Committee will hold current WBBI constituents to the same level of scrutiny as potential incoming constituents.

Addition

If you are interested in nominating a digital asset exchange for inclusion as a constituent in the WBBI, please send an email to contact@winkdex.com.

The Oversight Committee reviews incoming applications at least once per quarter.

The Oversight Committee will review each application. Based upon consideration of the application and whether the exchange satisfies the eligibility criteria, the Oversight Committee may add that exchange to the list of WBBI constituents.

At its discretion, the Oversight Committee may choose to review applications sooner. For instance, if an WBBI constituent has been removed, the Oversight Committee will act in the best interests of the WBBI by seeking a prompt replacement.

Suspension and Removal

If the Oversight Committee becomes aware of a major event that violates the WBBI constituent principles, the Oversight Committee may temporarily suspend the constituent in question.

Whenever possible, the Oversight Committee will suspend the constituent in question before the next business day on which the Gemini Auction runs and WBBI values are calculated as the collar price for Indicative Prices and the Gemini Auction final price.

When the Oversight Committee completes its investigation, it will decide whether to suspend the constituent in question temporarily or remove the constituent from the WBBI.

In the case of a temporary suspension, the Oversight Committee will record how the constituent violated the criteria, and determine a date on which the Oversight Committee will reconvene to decide whether the constituent has cured the violation. If the constituent has not cured its violation by that deadline, the Oversight Committee may remove the constituent from the WBBI.

When the Oversight Committee removes a constituent from the WBBI, the Oversight Committee will seek to find a replacement within three months.

Once an exchange has been removed from the WBBI, the Oversight Committee will consider whether to add the exchange back. Consideration may include, among others, one or more of the following criteria:

- The violation(s) has been cured to the satisfaction of the Oversight Committee;
- The exchange has met all eligibility criteria for a minimum of either two consecutive calendar quarters or whatever time period the Oversight Committee deems necessary; and
- Any criteria that the Oversight Committee deems relevant.

How Will the Index Handle Forks?

The underlying protocol of the Bitcoin Network is subject to changes in its operating

rules (i.e., “hard fork”). A hard fork means that the Bitcoin Network has been modified in a way that makes it incompatible with the unmodified Bitcoin Network, and some population of miners and/or users of the network accept the modifications, thereby resulting in two Bitcoin networks that have not been merged together in a timely fashion.

If the Blockchain for bitcoin diverges into different paths, the form of bitcoin on which the index will be based is the form of bitcoin traded on the Gemini Exchange, in accordance with the [Gemini User Agreement](#) at the time of the fork. Please refer to the [Gemini User Agreement](#) section on “Forks” for more information.

Constituent Review During Hard Forks

In the lead up to a hard fork, the Oversight Committee will meet regularly to review the position of all the WBBi constituents.

In the event of a hard fork, whereby a WBBi constituent diverges from recognizing Bitcoin as the blockchain with the greatest cumulative computational difficulty and the constituent does not offer or continue to offer a central limit order book for the same blockchain recognized by Gemini as Bitcoin, the Oversight Committee will remove that constituent from the WBBi value calculation before the next business day on which the Gemini Auction runs and Indicative Prices, the Gemini Auction final price, and all respective WBBi collar prices are broadcast.

Once the situation stabilizes, the Oversight Committee will determine whether the constituent should be suspended temporarily or removed.

If the constituent continues to offer a central limit order book for the same blockchain recognized by Gemini as Bitcoin, and even if that central limit order book is operating with a different symbol, the Oversight Committee will evaluate whether that central limit order book has sufficient volume, liquidity, transparency, and stability for the exchange to be included as a constituent in the WBBi. If so, the exchange will be used as a constituent in calculating the WBBi value. If the trade data are deemed to be insufficient, then the Oversight Committee will remove the exchange as a constituent of the WBBi. If a constituent is removed, the Oversight Committee will attempt to replace it within three months with another exchange that meets the WBBi selection criteria.

Historical Data

Following each Gemini Auction that runs on a business day, we post an updated zip archive file containing a CSV file, which contains the WBBi values used as collar prices for the indicative and final Gemini Auction events. This file can be downloaded from https://downloads.winkdex.com/auction_collar_price_history.csv.zip.

The Gemini Auction on December 18, 2017, was the first Gemini Auction to use the WBBi value as a collar price; however, for reference purposes, the CSV file also contains WBBi values for every Gemini Auction since the first ever Gemini Auction ran on September 21, 2016, in an effort to demonstrate how the WBBi behaved historically. Prior to December 18, 2017, WBBi values were not used as a collar price for any Gemini Auction.

Format

The zip archive contains a single file³ with the following header and column values:

Header	Required?	Data type	Notes
auction_id	No	integer	When present, this value was used as the collar price for an Indicative Price or Gemini Auction final price; when absent, this value is being supplied for reference purposes.
scheduled_time_utc	Yes	text	ISO 8601 formatted date, UTC timezone. The time at which a Gemini Auction event ran; if auction id is empty, the time it would have run.
type_of_event	Yes	text	Indicative or Final
index_value	Yes	decimal	The index value used as the collar price for the auction event (if auction_id column is populated) or supplied for reference purposes.

³auction_collar_price_history.csv

index_value_calculated_at_time_utc	Yes	text	ISO 8601 formatted date, UTC timezone. The time at which the WBI value was calculated.
------------------------------------	-----	------	--

ALL WINKDEX CONTENT AND WINKDEX INDICES ARE PROVIDED ON AN "AS IS" BASIS. WINKDEX DISCLAIMS ANY AND ALL EXPRESS OR IMPLIED WARRANTIES, INCLUDING ANY WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR USE, OR OF NON-INFRINGEMENT OR ANY OTHER VIOLATION OF ANY THIRD PARTY INTELLECTUAL PROPERTY OR OTHER RIGHTS. In no event shall Winkdex or any affiliate or associated entity be liable to any party for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including lost income or lost profits and opportunity costs) in connection with the use of any Website content or Winkdex Index, even if advised of the possibility of such damages.

You should not rely on any Website content or Winkdex Index in connection with making any investment or other business decision. Our Website, its content, or a Winkdex Index is not a

substitute for the skill, judgment, and experience of you, your management, employees, advisors, and/or clients in making any investment or other business decision. While Winkdex has obtained information from sources it believes to be reliable, Winkdex does not perform an audit or undertake any duty of due diligence or independent verification of any information it receives.

Risks

Please note the following risks in accessing or using a Winkdex Index:

- The risk of loss in trading digital assets (sometimes called “virtual currencies” or “digital currencies”) or instruments linked by or to, or otherwise referenced in or referencing a Winkdex Index may be substantial and losses may occur over a short period of time;
- The markets for digital assets are highly volatile. The price and liquidity of digital assets have been subject to extreme fluctuations in short periods of time in the past and may be subject to further extreme fluctuations in the future. Such fluctuations may adversely affect the level of the a Winkdex Index;
- Legislative and regulatory changes or actions at the state, federal, or international level may adversely affect the use, transfer, exchange, and value of digital assets and a Winkdex Index;
- Digital assets are not legal tender and are not backed by the government, which could adversely affect their value and the level of a Winkdex Index;
- Transactions in digital assets are generally irreversible, and, accordingly, losses due to fraudulent or accidental transactions may not be recoverable, and this may adversely impact the level of a Winkdex Index;
- The value of digital assets is derived in large part from the continued willingness of market participants to exchange fiat currency or digital assets for digital assets, which may result in the potential for permanent and total loss of value of a particular digital asset should the market for that digital asset disappear, which may adversely impact the level of a Winkdex Index; and
- The nature of digital assets may lead to an increased risk of fraud or cyber attack, and this may adversely impact the level of a Winkdex Index.

By using our Website or investing in any instrument indexing or linked to a Winkdex Index, you acknowledge and agree that you are solely responsible for determining the nature, potential value, suitability, and appropriateness of these risks for yourself, and that Winkdex does not

give advice or recommendations regarding digital assets, including the suitability and appropriateness of, and investment strategies for, digital assets and related funds, vehicles, and products. You acknowledge and agree that you observe, utilize and reference a Winkdex Index, and invest in financial products and instruments indexing or referencing a Winkdex Index at your own risk. This brief statement does not disclose all of the risks associated with digital assets and using or referencing a Winkdex Index. Therefore, you should carefully consider whether such use is suitable for you in light of your circumstances and financial resources. You acknowledge and agree that under certain market conditions, it may be difficult or impossible to liquidate a position in a fund, security vehicle, digital asset, or other product that is indexed to, references, or otherwise relates to a Winkdex Index.

For additional information regarding futures trading risks, see the Risk Disclosure Statement set forth in CFTC Regulation §1.55(b) (17 CFR section 1.55(b)).

Additional Terms

You acknowledge and agree that your right to use our Website, its content, or any Winkdex Index is subject to any limits established by Winkdex in its sole discretion. Winkdex may modify, amend, or completely remove any Website content, including any Winkdex Index, or change its availability to you, at any time and for any reason in its sole and absolute discretion.
